Summary

Second-year Software Engineering undergraduate at APIIT Sri Lanka with hands-on experience in full-stack web and mobile application development. Skilled in API integration, state management (Provider), database design, and implementing core Data Structures and Algorithms, including linked lists, trees, and graph-based shortest path optimization.

Experienced in building responsive user interfaces, structured backend systems using PHP/MySQL, and scalable Flutter applications with online/offline data handling.

Actively engaged in student initiatives, developing leadership, collaboration, and problem-solving skills. Seeking a software engineering internship to contribute technical expertise while continuing to grow in real-world development environments.

Education

Asia Pacific Institute of Information Technology (APIIT) Colombo, Sri Lanka

- BSc (Hons) in Software Engineering Expected: December 2027

Degree awarded by Staffordshire University, UK

- Foundation in Computing – Pass Completed: June 2024

Delivered by APIIT Sri Lanka in partnership with Staffordshire University

Viharamahadevi Balika Vidyalaya Kiribathgoda, Sri Lanka

- Completed primary and Secondary Education From 2011 to 2023
- G.C.E. Ordinary Level Completed: June 2023

Technical Skills

- Programming Languages:

  C#, Java, Python, JavaScript, PHP, Dart, SQL

- Mobile & Web Development:

  Front-End – HTML, CSS, JavaScript, Flutter, React Native

  Back-End – PHP, Laravel, C #

- Data structures & Software Engineering

  Linked Lists, Trees (N-ary), Graphs (Dijkstra's Algorithm)

  Object-Oriented Programming (OOP), Algorithm Design)

- Database Management:

  MySQL, Experienced in ER diagram design, normalization, and structured query writing

- Operating Systems:

  Windows, macOS (proficient); Linux (basic proficiency)

- Tools & Platforms:

  VS Code, Git / GitHub , XAMPP / MAMP, Composer, Postman, Figma , Canva

Memberships & Leadership

Prospect Member – APIIT Rotaract Club

- Participated in all club programs and student-led initiatives, demonstrating consistent engagement and teamwork
- Collaborated with peers to coordinate community-focused activities that promoted service and inclusion
- Currently planning and preparing to spearhead future service projects aimed at strengthening leadership capabilities and team collaboration

Member – Girl Guide Society (2014 – 2018)

- Actively participated in school-level and inter-school guiding activities.
- Developed leadership, teamwork, and community service skills through organized camps and events.
- Contributed to discipline, responsibility, and social service initiatives within the school community

Academic Projects

1. Full-Stack Android Mobile Application (Flutter)
   Developed a multi-screen Flutter mobile app with API-based authentication and dynamic data integration. Implemented Provider for state management, online/offline JSON handling, local data storage, and a master-detail scrollable list. Integrated device features include geolocation, camera, battery status, network detection, light/dark mode, and an Eye Comfort (yellowish) screen mode.
   GitHub Link: https://github.com/kaushipeter/flutter-assignment-

2. Startup Pipeline Management System (C#)
   Designed and implemented a console-based system using Linked Lists to manage startup-investor matching based on priority and FIFO logic. Applied OOP principles and algorithm-based decision-making.
   GitHub Link: https://github.com/kaushipeter/startup-pipeline-management-

3. Health & Fitness Recommendation Quiz System (C# – N-ary Tree)
   Built an N-ary Tree-based decision system to generate personalized fitness plans through hierarchical question traversal. Applied tree structures, DFS traversal, and OOP concepts, including inheritance and polymorphism.
   GitHub Link: https://github.com/kaushipeter/fitness-recommendation-system

4. Railway Network Optimization System (C#)
   Implemented a directed weighted graph using an adjacency list and applied Dijkstra's Algorithm to compute shortest paths. Designed multi-stop route optimization using permutation logic for minimal total distance calculation.
   GitHub Link: https://github.com/kaushipeter/Railway-Network-Optimization-System-C-

5. Students' Sports Management System

   Completed the development of a web-based Student Sports Management System in collaboration with a team. The system manages student sports operations, including budget requests and approval workflows, event and training session management, attendance tracking, and an integrated calendar system.

   The project was developed using **PHP and MySQL**, providing hands-on experience in backend development, database design, and real-world administrative problem-solving.

   Through this project, I strengthened my teamwork, system analysis, and problem-solving skills by addressing practical operational challenges with effective digital solutions.

   Hosted Link: **https://sportsmanage.page.gd**

6. Luxury Perfume Website
   a. Designed and implemented a full-stack e-commerce system with backend logic in PHP, database, database management using MYSQL, and a responsive frontend built with HTML and Tailwind CSS.
      GitHub Link: https://github.com/kaushipeter/Aura-by-kiyara-.git
   b. Implemented a Flutter (Dart) Mobile web application supporting product listing, user authentication, add-to-cart actions, and simple order workflows.
      Github Link: https://github.com/kaushipeter/perfume_store.git
